

XF Reader

Play back your MXF and GXF files without hassle

XFReader is a professional, high-performance Viewer enabling you to browse all your MXF and GXF files, whatever their wrapped essence format.

The XFReader, which is completely agnostic to any HD or SD video format, has been widely adopted by the Broadcasting industry, including TV channels and software companies.

It is easy to install on any Windows platform and significantly facilitates the viewing of media on local or remote PCs.

Version 2.0:

- > Viewing of MXF Avid media
- > Viewing of all MXF HD media
- > Support of MXF Op1a, Op1Atom, Op1b ext. ref.
- > Advanced audio track selection and management
- > Essence encryption management
- > MXF sub-clip creation

A ready-to-use Viewer

XFReader comes with a video software decoder and is delivered ready-to-use: double-click or simply drag'n drop any MXF or GXF file and it will automatically start the play back process, allowing you to view and listen to a range of audio and video content.

The **XFReader** is ideal for previewing media on location or for manipulating content on a PC in a production network environment.

Opt for the SDI file display

When linked to an SDI video board, the **XFReader** becomes an easy-to-use and highly efficient SDI player, freeing one or more video channels on your Playout server.

You can then check the content on a professional video monitor or make a video tape export with no trouble at all.

An easy-to-integrate module

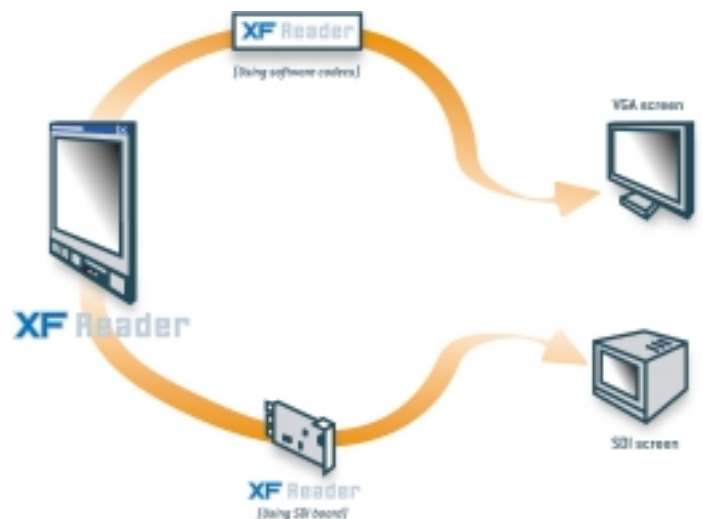

The **XFReader** is also offered as an ActiveX module that can be integrated directly into a Web browser or Windows application.

The module can be easily adapted to existing tools, providing quick and reliable support for both MXF and GXF formats.

XFReader is based on the OpenCube MXFTk® Reader DirectShow filter
