

SHASTA

Shasta Family

Mt. Shasta is one of the highest mountains in the United States a once-fiery volcano that rises into the skies in the far north of California. Covered with ice and snow year-round, it meets the demand posed by serious mountaineers. **Shasta** digital routing switchers are our rugged family of SDI/ DVB-ASI and AES/EBU audio products. Like the mountain, they are able to accommodate the most demanding applications.

FEATURES:

- Serial digital video
- DVB-ASI
- AES/EBU digital and analog audio
- 6 basic frames, dozens of system configurations
- Frames accept any mix of digital & analog audio crosspoint modules
- Variety of control panels from the new SCP control panels to Tahoe control systems

The Shasta family offers serial digital matrix switching from 8x8 to 16x16. The Shasta family also offers DVB-ASI capability. All models feature 300M automatic cable equalization for data rates from 140 to 400Mbps. The Shasta 88D even accepts the ATSC digital standard. For serial digital audio, the family can handle all standard audio data rates.
