

GAR gangable audio rack

Fully welded and seamless construction, GAR racks feature beveled front corners for enhanced, cosmetics. Optional locking front doors provide maximum clearance for installed equipment and include recessed handles. Optional locking side panels with recessed handles are easily installed. The optional locking rear door is recessed to minimize footprint, and features ample ventilation slots.

Wide-profile rack rail offers maximum internal clearance for cable management, and features "ob-round" cable passage slots to ensure that front and rear connectors of installed equipment can be connected easily and neatly.

For enhanced versatility, the GAR features optional roof insert kits for use with standard rack panels. The removable KO panels at the rear of the rack include round conduit knockouts and BNC connector knockouts for use with wireless antennae.

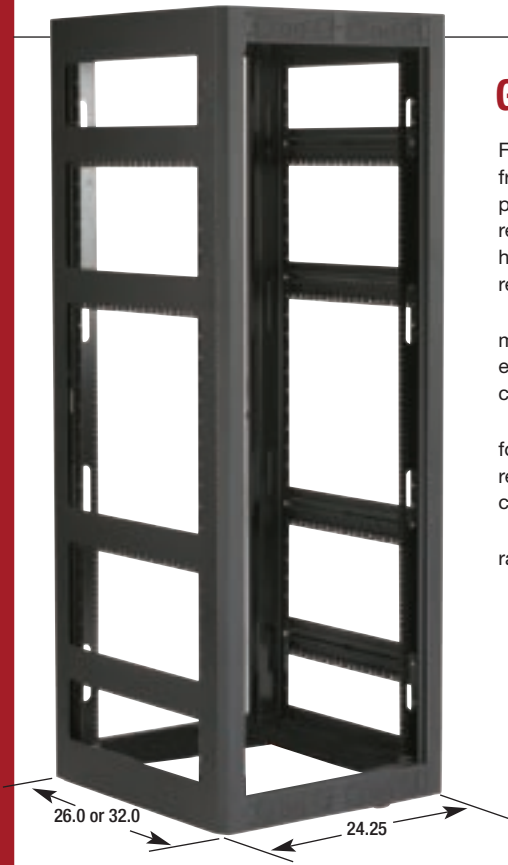

A full range of cable management options is available for the GAR racks, including buss bars, lacing strips and tie bars.

Removable knockout panel for conduit and BNC connectors

Extra wide rack rail

standards
